

# iApprove + UnForm<sup>®</sup>

DOCUMENT MANAGEMENT

ISS Group (ISSG) and Synergetic Data Systems, Inc. (SDSI) are pleased to announce an exciting collaboration that will deliver **new value** to QAD User Organizations. By ‘connecting’ the ISSG iApprove™ Approval Routing/Workflow Solution with the SDSI UnForm® Document Management Solution (DMS), **QAD User Organizations will no longer need to manually enter Sales Order data into QAD!** Instead, the UnForm® Solution will ‘scan’ the incoming Customer POs (PDF) utilizing OCR and AI technology and deliver the PO data to iApprove™ for approval routing and the creation of a confirmed QAD Sales Order.

iApprove™ is a Business Process Approval Routing/Workflow Solution developed for QAD Integrated Processes (Processes that utilize QAD datapoints for approval routing/workflow and Processes that result in a validated QAD transaction). iApprove™ is one of a suite of *Data-Driven* Approval Routing and Worklow Solutions ISSG provides to the QAD User community. QAD User Organizations have been using the ISSG Approval Routing/Workflow Solutions since 1995 to improve control over and streamline a variety of QAD Processes such as creating Purchase Orders, Sales Orders, Credit Memos, Inventory transactions, Master File maintenance transactions, and more. Below is the data flow of the iApprove™ Sales Order Approval Process.

UnForm® is a powerful enterprise document management and process automation solution that provides the ability to create, deliver, capture, index, route, and store documents from start to finish so that a transaction’s entire life cycle can be accessed with one easy search. UnForm® is being used by thousands of companies throughout the US to satisfy their document management requirements. By connecting UnForm® to the ISSG iApprove™ Solution, interesting and unique **add-value** opportunities present themselves, such as the creation of a QAD Sales Order being created from an emailed PO (PDF) without any manual intervention
